

Informix Remote DBA Support

Remote technical and DBA support from Advanced DataTools helps small, medium, and enterprise installations maximize their Informix database performance and uptime while minimizing costs and overhead. We can help resolve and prevent the worst technical problems you could imagine!

Top experts in the field, Art Kagel and Lester Knutsen manage and support our team of certified Informix consultants. Art and Lester *each* have over 28 years of Informix DBA experience, have received the IIUG Directors Award, and have twice received the Information Champion award from IBM.

Our team can help save you time and money by assisting with:

- Emergency/Down Systems
- Trouble Shooting
- Vacation Coverage
- System Maintenance
- Short and/or Long Term Planning
- Upgrades/Migrations
- Passive System Monitoring
- Active System Monitoring
- One-Time Health Check
- Disaster Recovery

Support is provided for every feature of Informix including:

- High availability data replication
- MACH 11 clusters
- Server grids
- Enterprise data replication
- Performance and SQL tuning
- Instance and operating system tuning
- Application and schema design review

Advanced DataTools' team of highly experienced and certified Informix consultants are well trained in all levels of database performance and optimization. This allows us to offer our customers support contracts on all versions of Informix on any platform with any operating system.

We also support Informix Standard Engine, ISQL, I4GL, and Online 5.

About Advanced DataTools

Advanced DataTools Corporation is dedicated to providing web-enabled database and data warehouse consulting, design, and implementation services, as well as training and tools to support your enterprise system. The company was founded in 1993 by Lester Knutsen, a consultant with more than 20 years of experience in database development, support, training, and project management services.

After years of working with large-scale Department of Defense and civilian agency databases based on FFIS and FFS, Advanced DataTools' staff has a deep knowledge of the nature of data, database structures, and database security, and of how to store data in order to ensure rapid and flexible retrieval, manipulation, and reporting.

Advanced DataTools is also well known for its excellent technical training courses on database design, development and administration, Unix administration, and SQL. Our training is based on years of real-world consulting experience, and includes public, private, and customized offerings that can be taught at your site or ours.

Capabilities

- Building customized web-enabled data warehouses and OLTP applications
- Web/database and web/data warehouse integration
- Development of high volume, high performance financial reporting systems
- Development and performance of live tests and benchmarks of relational database software (Informix, DB2, Oracle, Sybase, and SQL Server)
